ADDITIONAL INFORMATION SUPPORTING NJD (e.g., paragraph 1 site conditions; paragraphs 2-3 rationale used to determine NJD, including information reviewed to assess potential navigation or interstate commerce connections; and paragraph 4 site information on waters of the U.S. occurring onsite):

Seasonal wetland is isolated, although approximately 50 feet from Sanchez Creek, separated by a substantial levee, therefore, hydrologic connection would be achieved only in the event of an extreme flood. Project is the enhancement of the isolated wetland by the USFWS and NPS for San Francisco garter snake habitat.
